David Kim

Senior Backend Engineer

david.kim@example.com | +1 (555) 890-1234 | San Jose, CA

PROFESSIONAL SUMMARY

Senior Backend Engineer with 7 years of experience architecting distributed, low-latency microservices. Deep expertise in Go, Python, PostgreSQL, Redis, Kafka, Docker, and Kubernetes.

TECHNICAL SKILLS

- Languages: Go, Golang, Python, SQL, C++
- Backend: Microservices, REST API, gRPC, FastAPI, Django
- Data & Messaging: PostgreSQL, Redis, Kafka, MySQL
- Cloud: Docker, Kubernetes, AWS, Linux, CI/CD

WORK EXPERIENCE

Principal Backend Architect — Stratus Financial (2020 - Present)

- Engineered distributed ledger transaction service in Go capable of handling 20,000 requests per second.
- Replaced monolithic backend with scalable Kubernetes microservices, cutting server compute costs by 35%.
- Optimized PostgreSQL schema and connection pooling with Redis caching to drop p99 latency to 18ms.

Backend Software Engineer — Quantix Software (2017 - 2020)

- Built Python FastAPI services and event-driven data streaming pipelines with Apache Kafka.
- Enforced code quality through test-driven development and CI/CD automation.

KEY PROJECTS

GoStream Core: Ultra-low-latency event streaming engine written in Go and backed by Kafka.
Distributed Rate Limiter: Fault-tolerant sliding window rate limiter implemented in Redis and Python.

EDUCATION

Master of Science in Computer Science, UC Berkeley (2017)
